

Workshop

Participants

Workshop 1 focuses on configurations vital to your business as well as basic business operations.

It is therefore recommended that one or more participants from the management are present. Possibly supplemented by an experienced project manager and the future responsible for TimeLog Project.

Form

The workshop takes place in your company or online.

We use GoToMeeting™ for online workshops – the best software on the market for virtual meetings. The software makes it possible to monitor the consultant's computer screen.

Duration

About 4 hours.

Price

EUR 670 excl. travel costs.

Booking

Contact TimeLog on +45 70 200 645 to book and schedule the workshop.

“ **The implementation was painless and exceeded all our expectations.** ”

– Torben Rune, CEO, Netplan, Denmark

Workshop 1

Set up TimeLog Project for your business

Let one of TimeLog's experienced implementation consultants help with the configuration of TimeLog Project so it fits your business processes.

The objective of Workshop 1 is to provide a thorough evaluation of the available options for adjusting TimeLog Project to your company.

We listen to your requirements, which then serve as a basis for a proper configuration of TimeLog Project.

With experience from more than 250 implementations in just as many different companies we are able to contribute valuable knowledge about best practice in areas such as project management, reporting, resource allocation and invoicing.

Workshop Content

Configuration of TimeLog Project and your business processes

- We go through your requirements, and how TimeLog Project can support your business processes.
- We choose the exact features you need and disable those you do not. You get a solution with minimal complexity and maximal benefits.
- We set all relevant parameters to support the processes of your company perfectly.
- We help you to import master data and dimensions, which ensure accommodation of your reporting requirements.
- We provide general advice based on our consultants' extensive knowledge about time tracking, project management, financial project management, resource management, billing and reporting of business data.
