“ TimeLog operates in the area between business software and web applications. Our goal is to develop business applications that improve the customers' bottom line and at the same time is easy to implement and focuses on user-friendliness. ”

**Søren Lund**  
CEO  
TimeLog A/S

Since the very start of TimeLog in 2001 focus has been on developing, selling and implementing business systems for time tracking, project management and invoicing.

TimeLog's main product is TimeLog Project which is sold either as a SaaS-solution or installed on the customer's own server. In both cases, the software is web based.

The internet is therefore essential to the way TimeLog views and runs its business. Whenever possible, solutions that favour online use are preferred.

### International market

All products, documentation and sales material is published in five languages as part of an international marketing strategy.

In 2008 the international sales exceeded sales in the domestic market. As of spring 2009 TimeLog now has more than 300 customers in more than 20 countries.

### Knowledge intensive customers

The typical customer is a company with 10-100 employees. In total, more than 10,000 people use TimeLog Project in their work.

TimeLog's customers include consultancies, consulting engineers, IT-departments, web

agencies, research units and administrative companies. Common for all these companies is that they deliver services to internal or external customers.

### Development with business insights

The product development takes place in cooperation with the customers. They contribute their business insight and TimeLog supplies knowledge about application development.

This approach supports standard products of a high quality that solve the customers' challenges.

### Complete organisation

TimeLog's employees are distributed among three areas of responsibility:

- Development: develops and maintains the products.
- Sales: responsible for marketing and customer relations management in sales.
- Professional Services: handles implementation, support and consultancy services.

### ISV/Software Solutions

TimeLog's products are built on Microsoft's technologies.

Since 2007 TimeLog has been a Microsoft Gold Certified Partner as well as a Microsoft ISV/Software Solutions.
